Horizon-AGN

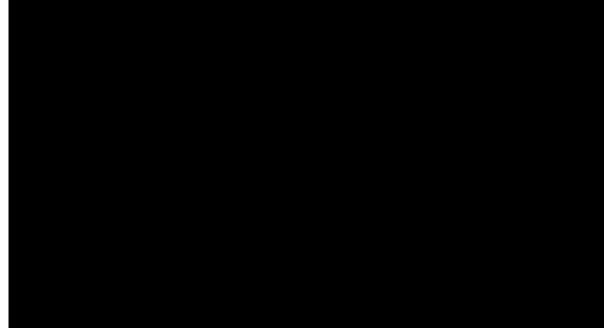

Dubois et al, 2014, Welker et al, 2014, Codis et al, 2015, Kaviraj et al., 2015, http://horizon-simulation.org

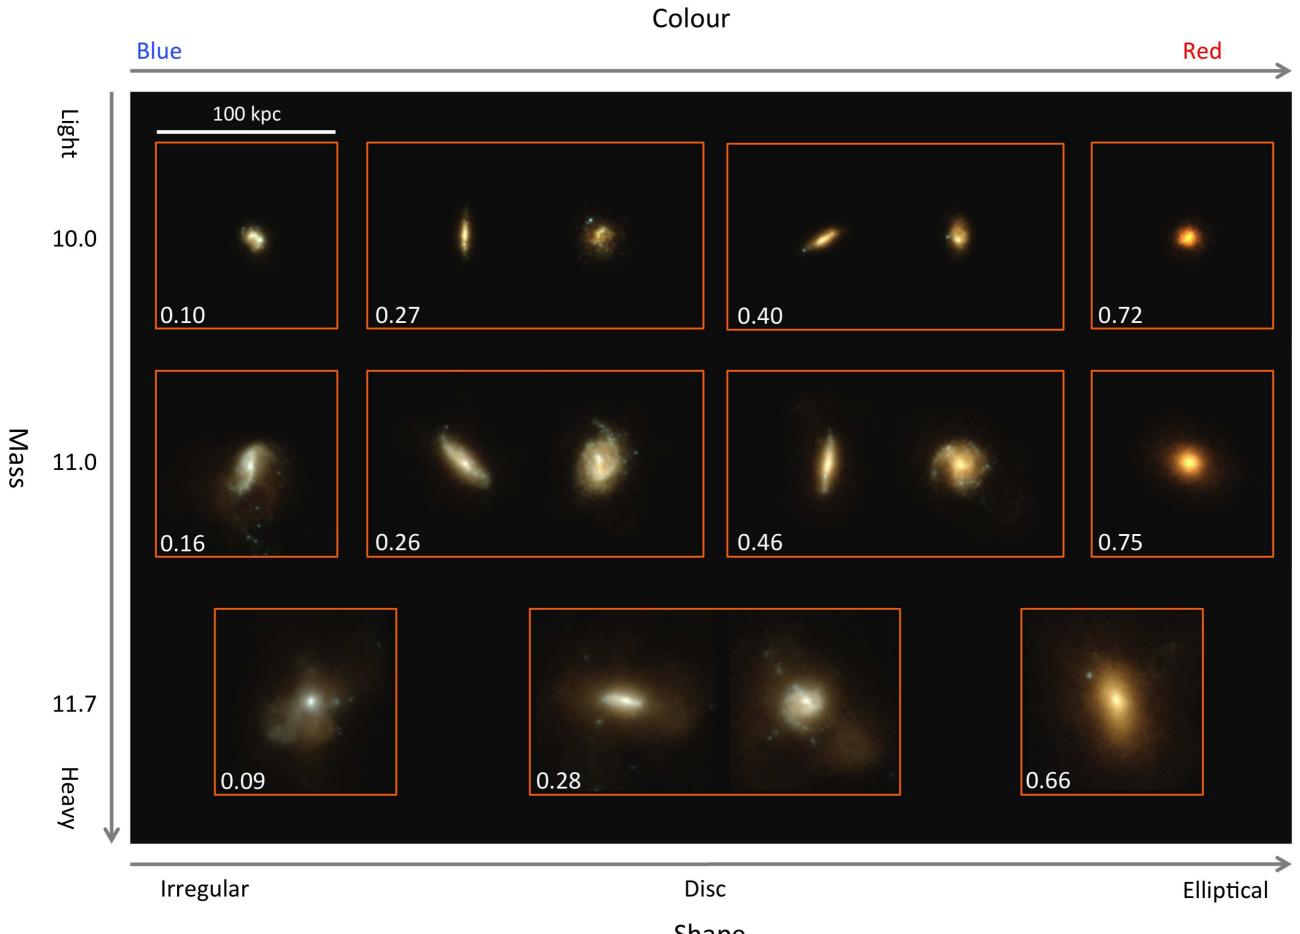

- Simulation content
 - Run with Ramses (AMR) Teyssier (2002)
 - L_{box}=100 Mpc/h
 - 1024³ DM particles M_{DM,res}=8x10⁷ M_{sun}
 - Finest cell resolution dx=1 kpc
 - Gas cooling & UV background heating
 - Low efficiency star formation
 - Stellar winds + SNII + SNIa
 - O, Fe, C, N, Si, Mg, H
 - AGN feedback radio/quasar

Outputs

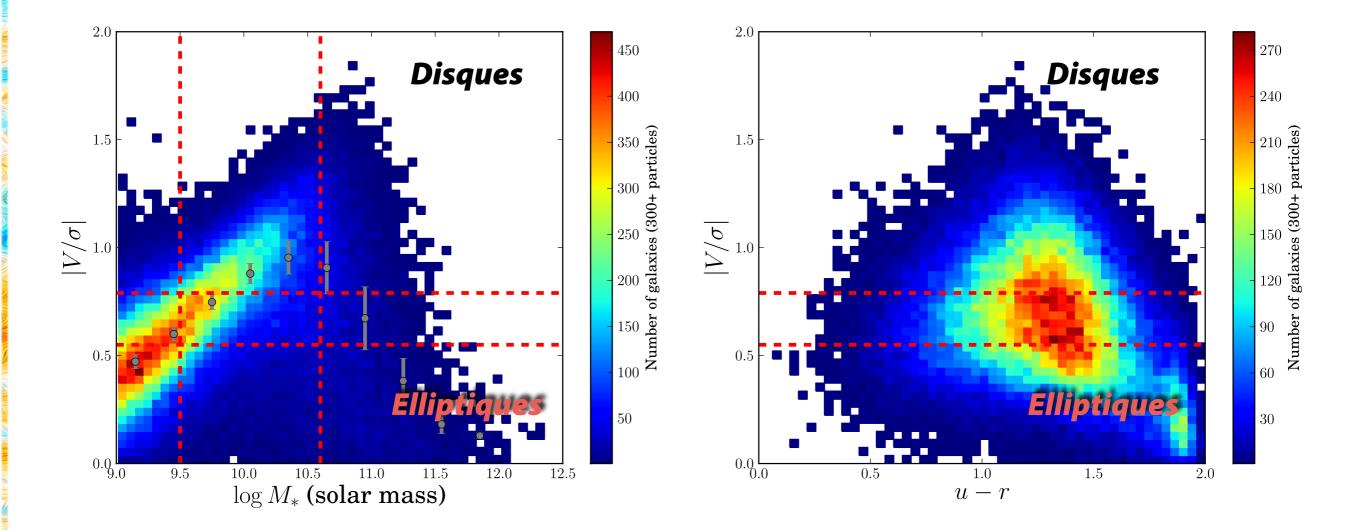

- Standard outputs ~200 Myrs
- Star particles are backed up every 10-20 Myr
- Lightcones (1°x1°) performed on-the-fly
 - Dark Matter (position, velocity)
 - Gas (position, density, velocity, pressure, chemistry)
 - Stars (position, mass, velocity, age, chemistry)
 - Black holes (position, mass, velocity, accretion rate)
- z=0 using 10 Mhours on 4096 cores
- 150 000 galaxies per snapshot (> 50 part.)
- 7.10⁹ leaf cells (more than Illustris or Eagle)

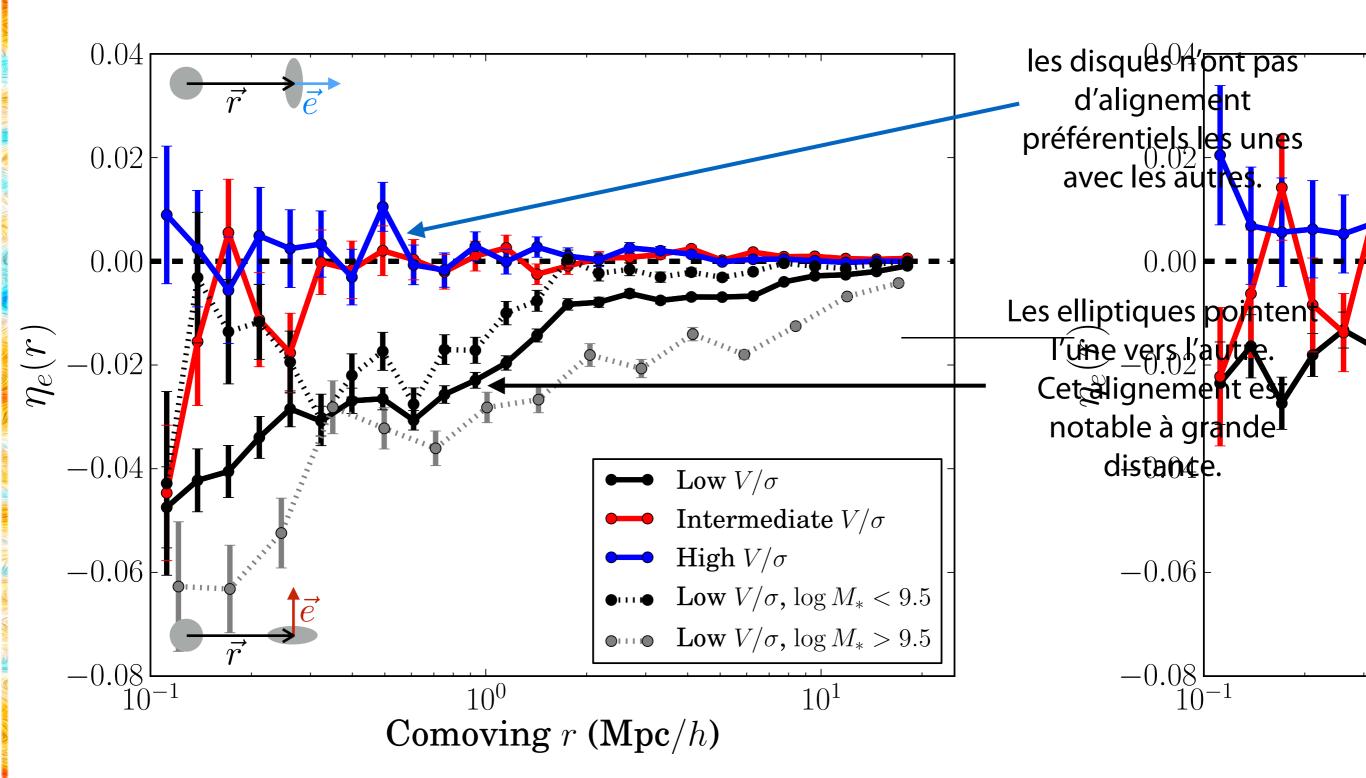

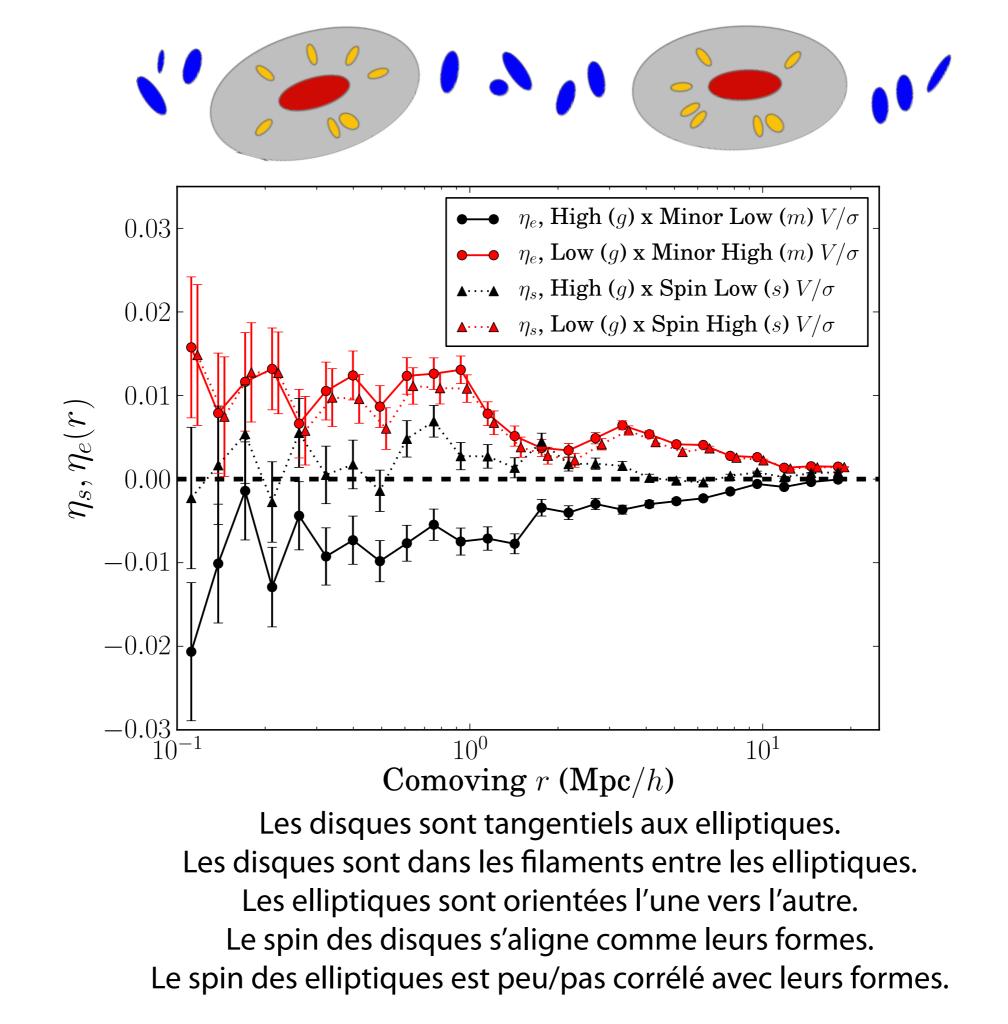

Shape

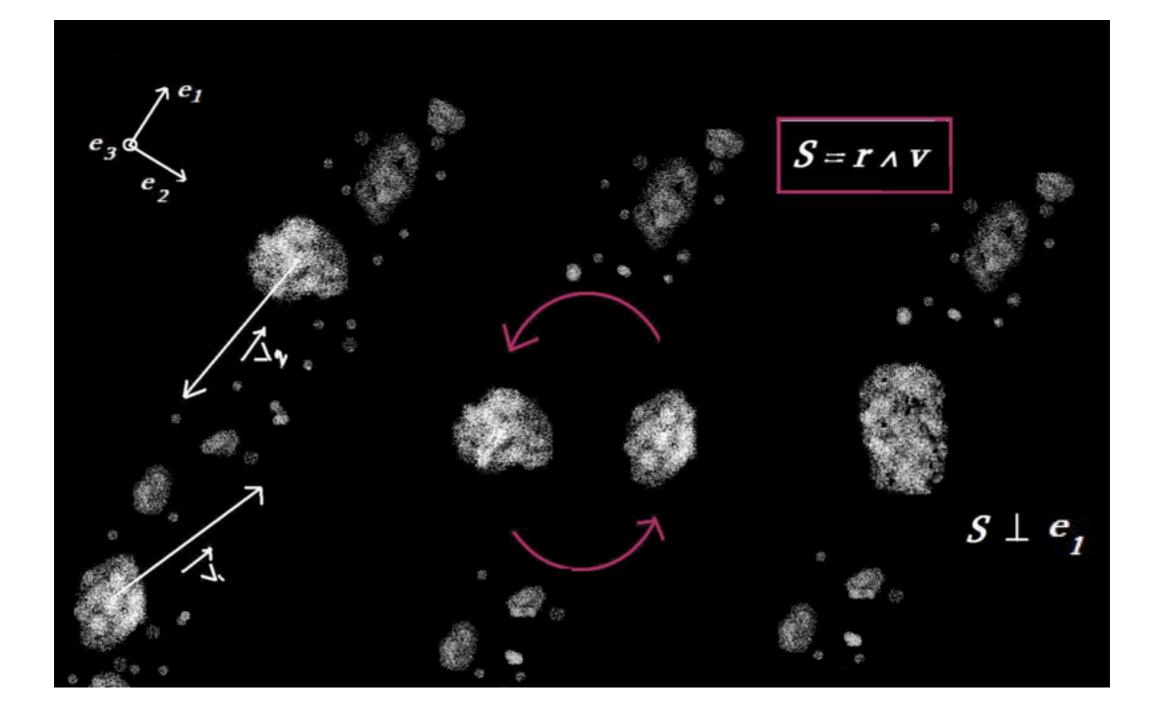

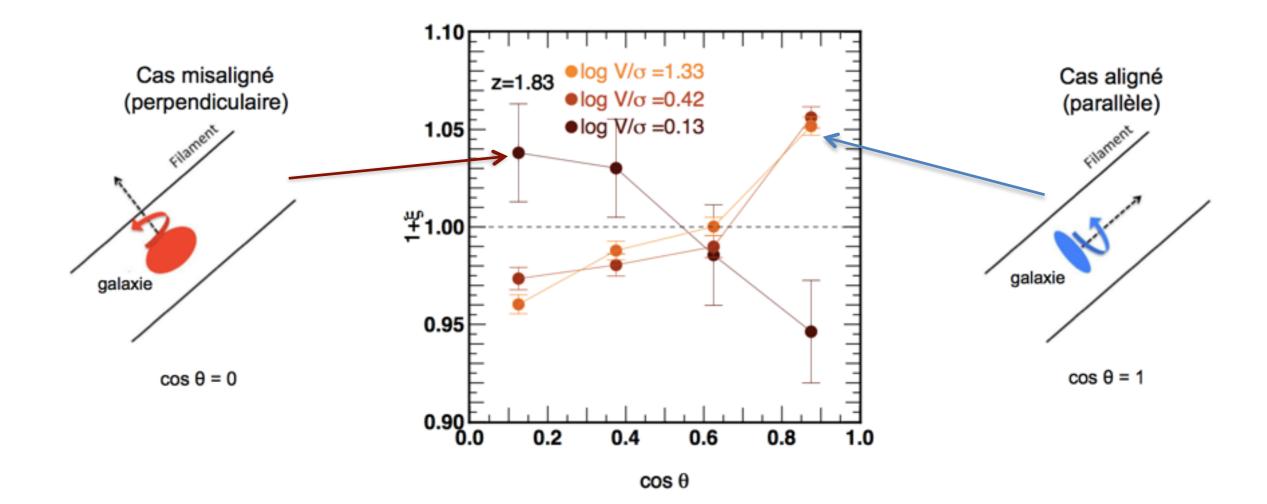

z=0.5 ~80000 objets contenants plus de 300 particules

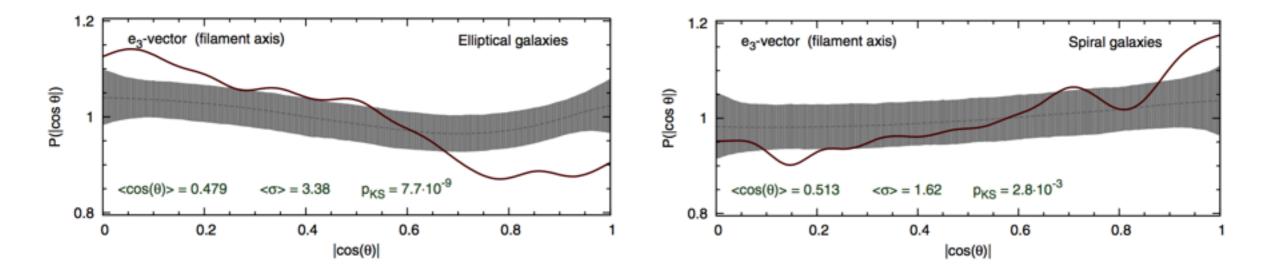

3D Gl term
$$\eta_e(r) = \langle |\hat{\mathbf{r}} \cdot \hat{\mathbf{e}}(\mathbf{x} + \mathbf{r})|^2 \rangle - 1/3$$

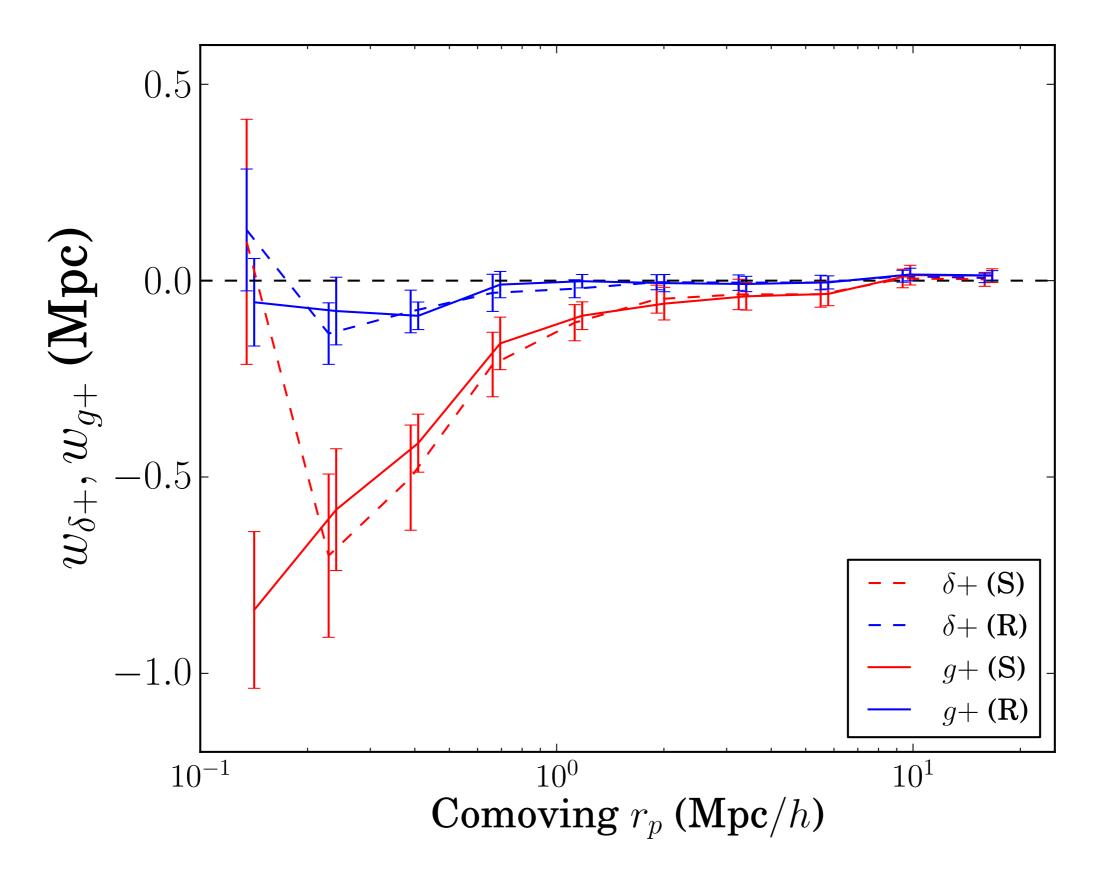

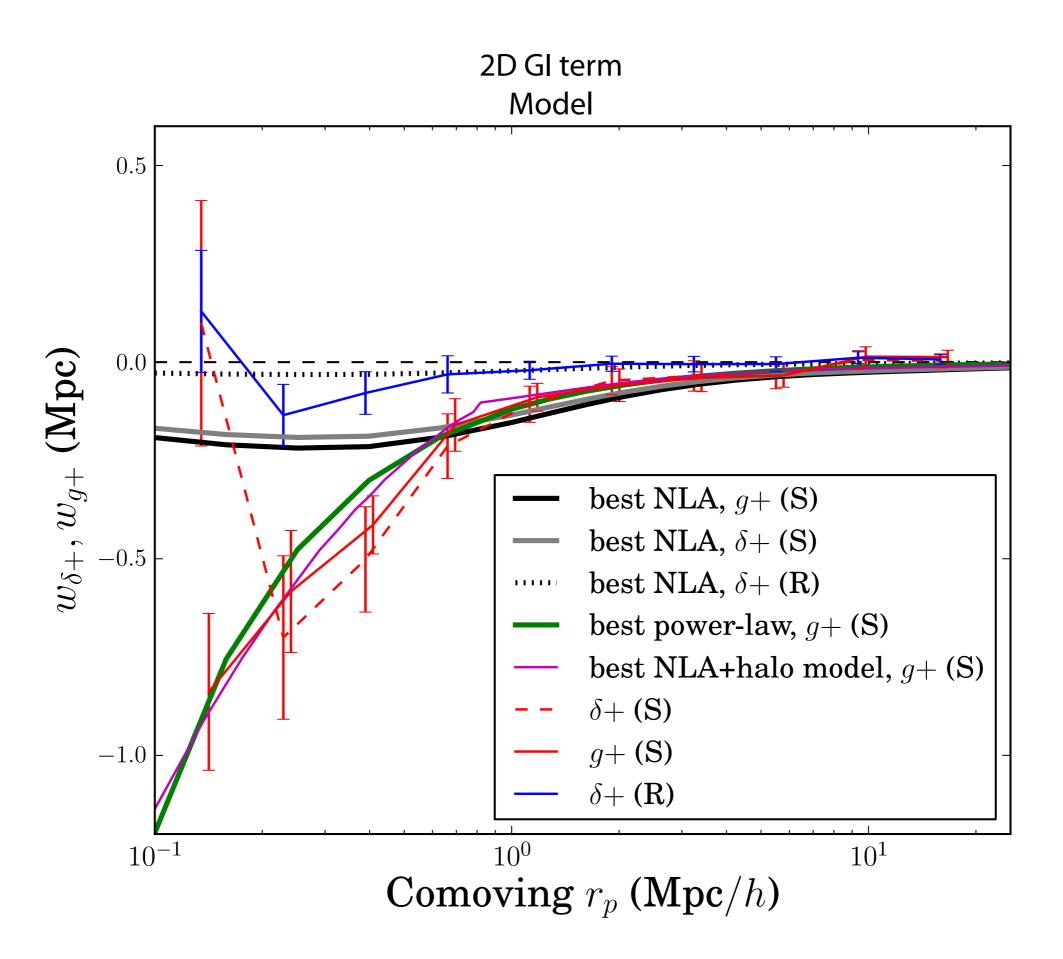

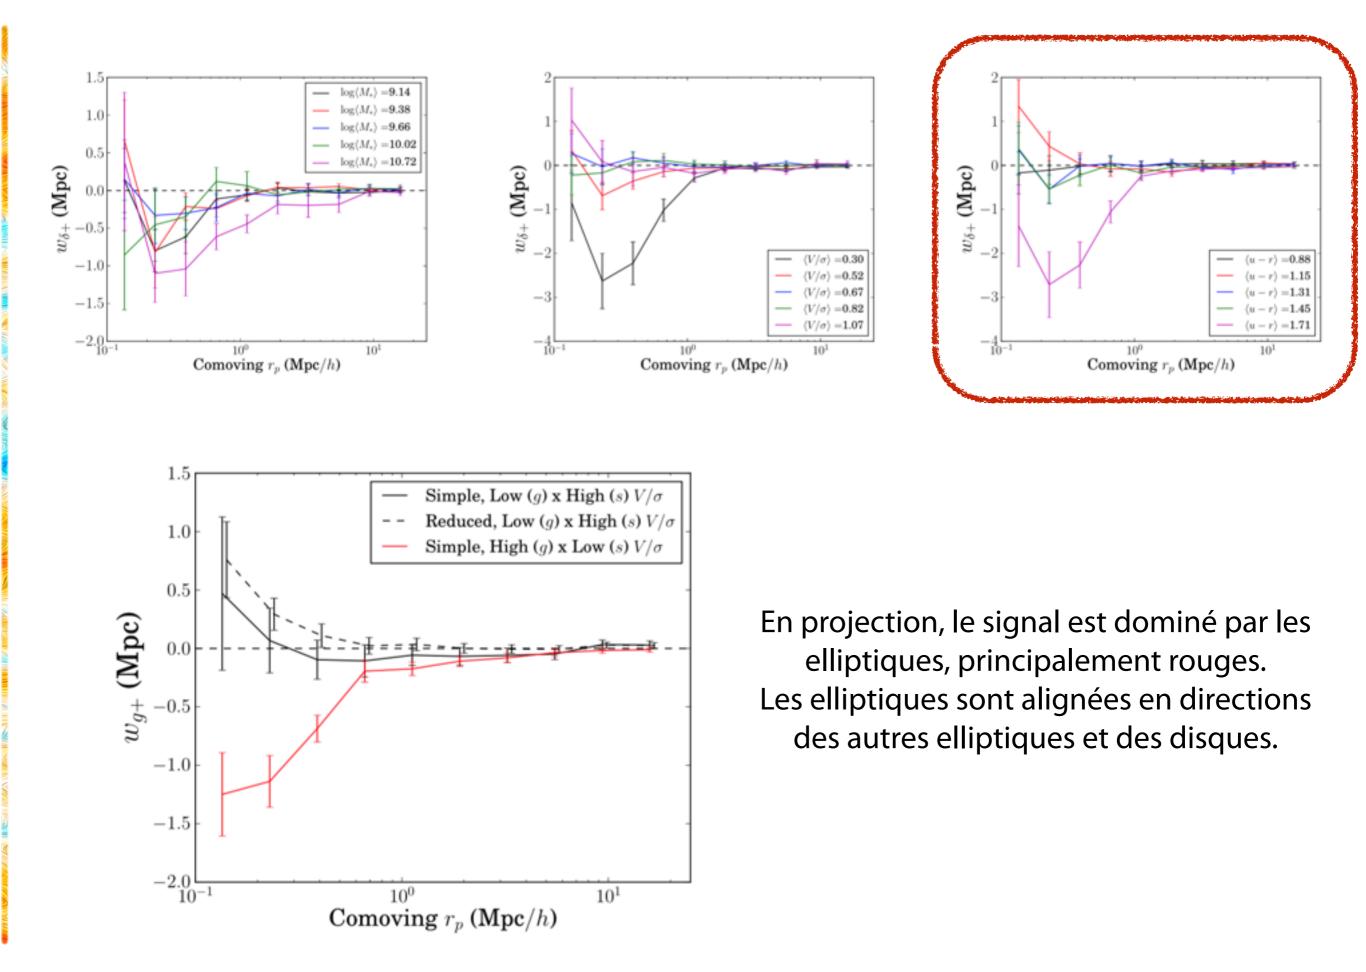

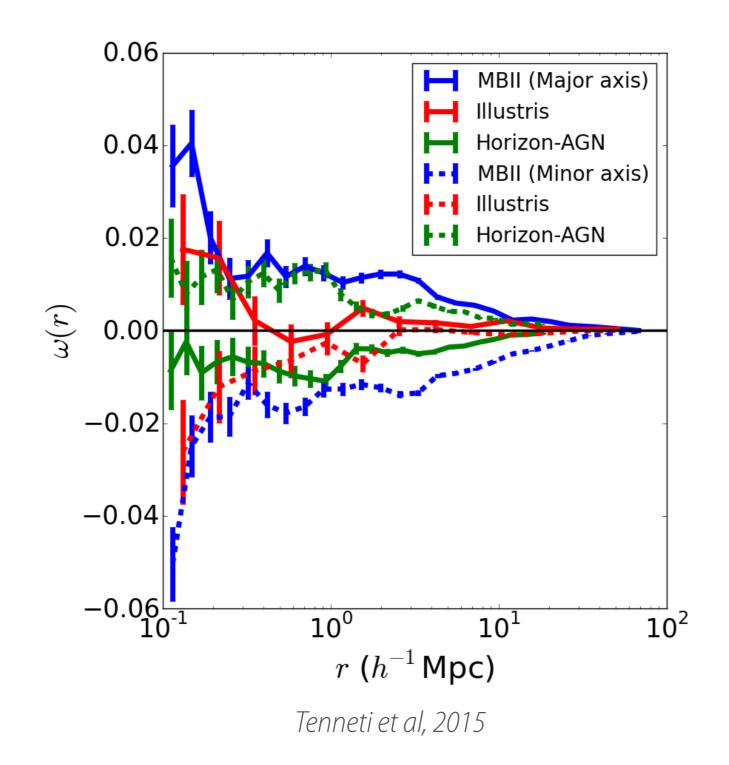

SDSS data. Tempel, Libeskind, 2013

2D GI term

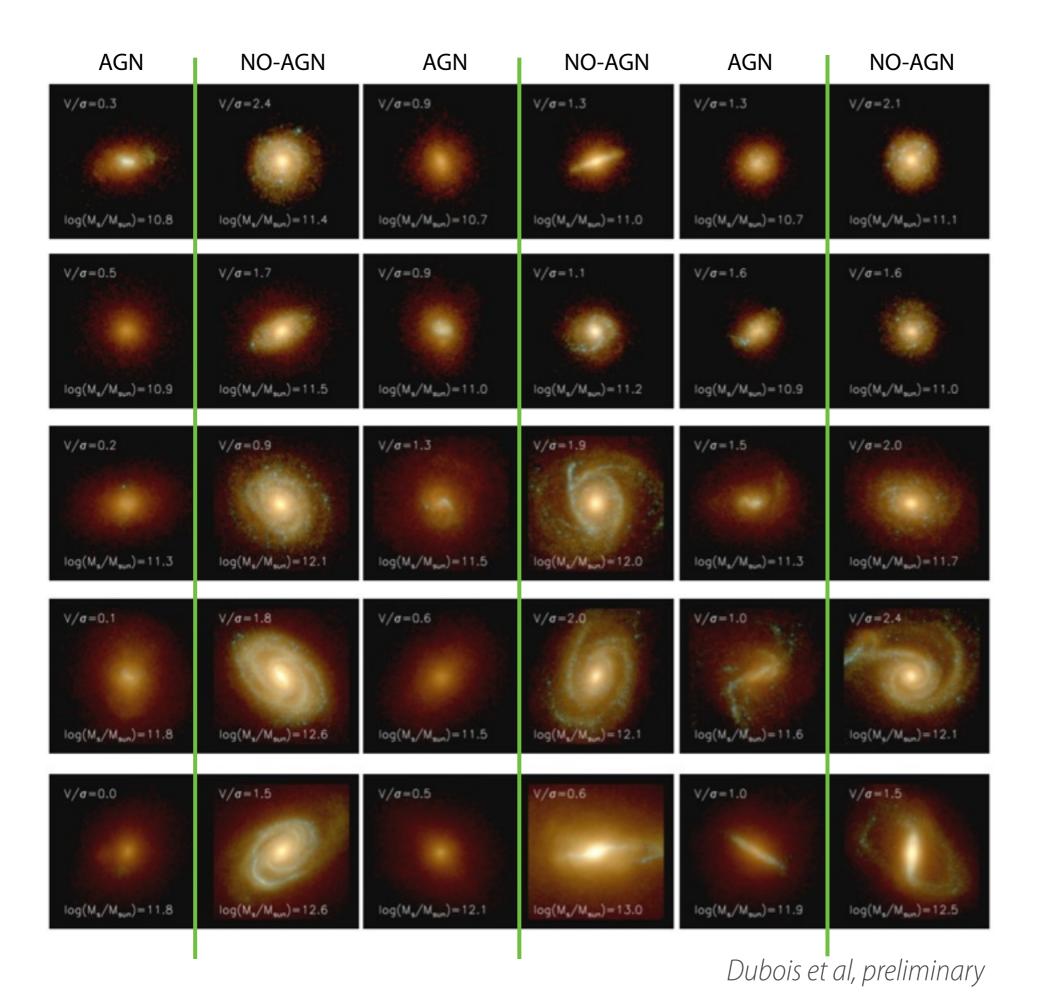

A partir des simus Massive Black et Illustris, conclusion opposée sur l'orientation d'alignement entre les disques et les positions des elliptiques !

Conclusions & perspectives

- Les elliptiques pointent entre elles. Les disques sont tangents aux elliptiques. *Cela correspond à notre compréhension théorique*.
- La contamination IA est fonction de la masse, couleur et dynamique des galaxies. Elle est dominée par les elliptiques rouges massives. Mais l'alignement des elliptiques vers les disques pourrait être un problème...
- Attention cependant à la dépendance des résultats aux détails de la physique sous-grille...
 - Conclusion identique sur l'alignement des elliptiques entre elles et sur l'effet dominant de cellesci sur l'IA, mais désaccord sur les propriétés 3D d'alignement des disques/elliptiques.
- Prochaines étapes
 - Dépendance en redshift, prédictions sur la contamination, modélisation
 - Amélioration/comparaison des modèles de feedback
